

INTRODUCTION

The PERFORM project is a project under the European Commission Horizon 2020 programme which will substantially improve chemical transformations based on bio-based feedstocks.

The overall approach is characterized by the development of four key technologies that will be integrated in the modular and flexible PowerPlatform:

- Paired electro-synthesis
- Electrochemical process intensification
- Upscaling of electrode production
- Integrated electrochemical process system design

PERFORM PROJECT APPROACH

CONSORTIUM

IMPACTS

Reduce Environmental impacts

Reduce CO₂ Emission

Use local resources
